# Becker M9 – Modular Storage System for Hospitals

**Interior fittings** made of chrome nickel steel sheets and tubing, material AISI 304 (1.4301) surface polished (240/ 320 grain), as well as powder-coated steel sheet for demanding “wear and tear” clinical usage. Chrome nickel steel elements are highly corrosion resistant and antimagnetic.

All interior components may be easily assembled and dismantled, at most by simply releasing screws. The components are either screwed in place or laid on chrome nickel steel shelf supports equipped with rubber buffering.

**The usable interior width with multi-purpose pullouts and interior drawers is 805 mm.**

Becker steel furniture from the B series is manufactured with electrolytically galvanised and chromatised thin sheet steel. Surfaces are powder-coated. The customer may choose the colours from the Becker Colour list. Different colours and powder coatings are available on request for an additional charge. All furniture is highly scratch and shock resistant as well as robust in contact with chemical agents.

**Tall cabinets** consist of double-walled, sound-deadened and reinforced components. The system includes an inserted double-walled floor, single wall rear panel and a double-walled top. Rear panels are also available double-walled for an additional charge.

**Doors** are equipped with dust resistant rubber sealing attached to wide angle hinges with a maximum 270-degree opening angle. Optional cabinet closures/locks are available as stated in the furniture description.

Robust, folded base frame with levelling fixture, standard height 100 mm.
