Becker M11

Modular storage system for hospitals

For more space and less cost. Architects and designers planning hospitals and medical facilities work with the **Becker M11** modular storage system. The advantage over conventional systems consists in the greater storage space and versatility. The layout is well structured and offers great variety in usage. The different system components are perfectly matched and can therefore be combined interchangeably.

Planning and Price Transparency

... thanks to the system's intelligent modular structure. Cabinet by cabinet, task-specific storage systems can be compiled module by module, the prices retrieved and calculated accordingly. If the function or deployment area of the storage units or systems changes over the years, it is incredibly easy to quickly modify, add to, expand or exchange them.

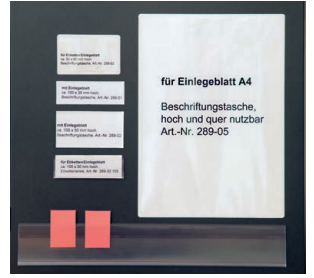

BECKER SYSTEMS for:

- wards
- out-patient departments
- operating rooms
- treatment rooms
- sterilisation departments

BECKER

Interior fittings made of chrome nickel steel sheets and tubing, material AISI 304 (1.4301) surface polished (240/320 grain), as well as powder-coated steel sheet for demanding “wear and tear” clinical usage. Chrome nickel steel elements are highly corrosion resistant and antimagnetic.

All interior components may be easily assembled and dismantled, at most by simply releasing screws. The components are either screwed in place or laid on chrome nickel steel shelf supports equipped with rubber buffering.

The usable interior width with multi-purpose pullouts and interior drawers is 1005 mm.

Tall cabinets consist of double walled, sound-deadened and reinforced components. The system includes an inserted double shelled floor, single wall rear panel and a double shelled top. Rear panels are also available double shelled.

Base cabinets include double walled, sound-deadened and reinforced components with single part inner body. The system includes an inserted double shelled floor. Without worktop. Rear panel also available double shelled.

Doors are equipped with dust resistant rubber sealing attached to wide angle hinges with a maximum 270-degree opening angle. Optional cabinet closures/locks are available as stated in the furniture description.

Robust, folded base frame with levelling fixture, standard height 100 mm.

Becker steel furniture from the B series is manufactured with electrolytically galvanised and chromatised thin sheet steel. Surfaces are powder-coated. The customer may choose the colours from the Becker Colour list. Different colours and powder coatings are available on request. All furniture is highly scratch and shock resistant as well as robust in contact with chemical agents.

BECKER

Becker high-grade steel furniture and equipment have been in use in hospitals and medical centres for decades. Optimum use of available space is achieved through an extensive assortment of programs and sizes.

Special designs and individual choice of colours as well as custom-built systems offer the customer an enormous variety of options.
